

## Vail 24

*Vail 24 Fireplace System with Optional Ceramic Aged Brick Liner, Cherry Mantel, and Hammered Pewter Frame, Louvers and Bottom Trim*

### **Vail 24 – a full-featured fireplace for smaller spaces**

The Vail 24 delivers the beauty of hand-painted ceramic fiber logs and natural flickering flames to dens, halls, and even bedrooms.

Vail 24 Fireplaces are rated at 20,000 Btu – enough heat to keep a family room cozy and warm. Special 10,000 Btu models are available in Millivolt and Intermittent Pilot for bedroom installations, where allowed by local codes.

The Vail 24 fireplace includes matte black louvers and frame. Available accessories include metal frames (in polished brass, hammered pewter, and stainless steel), blowers, brick liners, remote controls, and Standard Cabinet and Corner Mantels (in cherry, dark oak, oak, unfinished hardwood, unfinished oak, and white).

### **Control Options**

The basic Vail 24 operates with a built-in modulating hydraulic thermostat that automatically manages the flame to maintain your preset room temperature.

The Remote-Ready Millivolt Vail 24 Fireplace works with any of our battery operated Thermostat Remote Controls, or connect to a simple wall switch or wall thermostat.

The Intermittent Pilot Vail saves even more energy by eliminating the standing pilot – yet can still operate in a power outage with a battery backup.
